

Navori and BeMore Vision launch “Crans-Montana Swiss Ski Resort TV”

The Crans-Montana tourism office has a new information broadcast tool.

Within the Crans-Montana area, located in the Swiss Alps, visitors can get the local information channel on their TV sets or via the internet at: www.transmontana.tv

IT specialist Thierry Künzi says, “Our new intranet supports internal communications while sharing with visitors various types of information related to the Crans-Montana tourism office. This can include hotel information, lists of baby-sitters, garbage removal schedules, lists of special events in the area and more.”

“The Crans-Montana Resort Office needed an inovative solution so they could reach out to remote locations and communicate over a wide range of platforms, archive formats and database types. The principle behind this tool is simple. By grouping all our data on a single host, it’s easy to make everything accessible anywhere around the globe.”, says Crans-Montana’s Tourism Bureau Director .

For more information about the technology behind this project, please contact [Navori SA](#).
