NAVORI EXTENDED WATCHDOG • PROTECTOR OF YOUR DIGITAL SIGNAGE INVESTMENT

help me...

## NOTHING PROTECTS YOUR DIGITAL SIGNAGE LIKE EXTENDED WATCHDOG

Navori Extended Watchdog is:

- Software that monitors the health of your Player PC.
- An application that provides real-time feedback.
- A means of knowing exactly what is playing at any time.

Navori Extended Watchdog is an add-on module designed to be used with Navori Player. When installed, Extended Watchdog will monitor key Windows parameters and take preventive action before an issue affects the Player PC.

If a problem is detected, Extended Watchdog will either restart Navori Player or reboot the Player PC. Navori administrators will also receive email notifications to let them know there is a potential issue with a PC so they can take appropriate action.

This application also provides real-time feedback to the Navori Server so you are always kept informed on the status of each Player. Status is displayed using color codes and text messages.

You can tell the status of one or hundreds of Players at a glance.

## CAN YOU AFFORD NOT TO MONITOR YOUR SCREENS?

Anyone who relies on a screen network to generate revenue should consider monitoring Player PCs for optimal results.

Is your bottom line affected by the reliability of your PC network? Then it's time to consider Navori Extended Watchdog. This add-on to Navori Player will ensure your network is kept running even if your content is less than perfect.

Not all content is suitable for 24/7/365 playback. Freeware video codecs or poorly scripted web pages can leak memory over time which may eventually destabilize your Player PCs and create crashes. Why take chances when Extended Watchdog can detect and re-launch Navori Player before your screens are affected.

## MONITORING KEY WINDOWS PARAMETERS

Navori Extended Watchdog is designed to monitor key Microsoft parameters. They are:

- RAM
- GDI
- Handles
- Threads

If safe levels are exceeded, Navori Server will raise the alert status in the Player monitoring window and when appropriate, send out email alerts. Depending on the severity of the problem, Navori Player will either be re-launched or rebooted in an attempt to correct the situation and restore the PC to a stable state.

If these actions succeed, Navori Server will update the status window to reflect the change. Administrative staff are kept informed every step of the way so they can take action only when absolutely necessary.

As an added bonus, Extended Watchdog will report back on the currently running Playlist and show all the media it contains. Information is provided in near real-time as Watchdog communicates every 15 minutes.

You always know exactly what is running and where at any time. This is crucial for any signage network operator who relies on having a stable software platform that is highly resilient and capable of self-correcting issues related to content.

## NAVORI IS YOUR ONE TRUE DIGITAL SIGNAGE PARTNER

**Benefit from over 14 years of expertise in digital signage software development.**

Since day one, Navori has been focused on digital signage software development. Software is what we do best. In fact, it's all we do so we really know digital signage inside out. We know what works and what doesn't.

Next time you're looking at deploying digital signage, call us. It doesn't matter if you're installing a single screen or one hundred screens all over the country.

Navori has a solution for any size project.

Let our team show you how you can benefit from a versatile software solution that is designed for 24/7 operation from the ground up.
